Shock absorbing system

for front loader

FLDS is an innovative shock absorbing system for the front loader developed from a modern point of view. It consists of two accumulators with different pressures which are mounted on a joint base plate. The absorbing system will be turned on or off with an electrical 12 VDC 2/2 directional control valve.

Advantages:

- Spare the driver, trembling and shaking are absorbed
- Decrease of the cost, special sparing of front axle
- User-friendly / Serviceability, because of electrical connection of the directional control valve, user friendly
- Excellent damping proportion, is achieved because of the different presettled pressure of the accumulators
- Simple mounting, through threaded fixing holes in the base plate

Especially suitable for:

- * Tractor with front loader
- * Addition for front loader machines
- * Addition for shovels
