

Shock absorbing system for front loader FLDS2003

FLDS2003 is a new development for shock absorbing systems for front loaders with double acting cylinders. The system is connected to the in- and outlet ports of the cylinders and is easy to use through an electrical 12VDC on-off directional control valve.

The cushioning is controlled by three accumulators each with a different presetted pressure to control a wide range of wave movements and vibrations.

Advantages:

- Improved drivers comfort
- Less stress on the machine
- Less wear on machine and implement
- Simple assembly
- User friendly
